

Stable Isotopes for Petroleum Geochemistry

Key Benefits

- High analytical accuracy of the isotopic ratio, required composition and targeted isotope signature for various mixtures
- Increased analyzer calibration efficiency
- Isotopic composition adjusted for each of your products

Rely on an expert partner for your isotope ratio measurements

For more efficient upstream operations, from exploration to production, oil & gas companies need to increase recovery rates of existing fossil fuel reserves and better explore potential new sources. At the same time, their products must be processed safely and cleanly.

To more thoroughly understand the mechanisms of formation and the compositional evolution of gas accumulations on a geological subsoil/field, isotopic analysis is used to maximize information derived from each well, reservoir or field and assist in accurate exploration and production development planning.

Whether you are an oil & gas company, university or a quality control laboratory, Air Liquide provides a range of mixtures for equipment calibration and to help extract critical well information.

Air Liquide is the first and only gas supplier to propose a complete standardized offer for stable isotopic analysis worldwide.

With 30+ years of experience in specialty gases production and application, and strong, recognized R&D capabilities, you can trust Air Liquide to ensure product quality, availability and responsiveness.

A product range dedicated to stable isotopic analysis

Air Liquide's offer provides a high purity level and very precise specification of the isotopic ratio of the molecules to ensure accurate analysis and calibration.

Part of the **ALPHAGAZ™** product range, Air Liquide's premium brand of specialty gases for analytical applications, the Isotopes product range for Petroleum Geochemistry consists of multi-component, natural gas calibration mixtures up to C5 species with specific $\delta^{13}\text{C}$ and $\delta^2\text{H}$ ratios:

- **ALPHAGAZ™ Mix Isotope:** a range of calibration mixtures with different gas and isotopic compositions.
 - Biogenic mixtures
 - Thermogenic mixtures
 - Methane or carbon dioxide mixtures

On demand mixtures with customer specific molecular (from ppm to %) and isotopic compositions are also available:

- C1 with $\delta^{13}\text{C} = -69$ to 0‰
- C2 with $\delta^{13}\text{C} = -28\text{‰}$
- C3 with $\delta^{13}\text{C} = -32$ or -22‰
- C4 with $\delta^{13}\text{C} = -30\text{‰}$
- C5 with $\delta^{13}\text{C} = -25\text{‰}$

Other components such as H_2S , N_2 , N_2O , CO , H_2 , and CO with specific $\delta^{34}\text{S}$, $\delta^{15}\text{N}$, $\delta^{13}\text{C}$, $\delta^{18}\text{O}$ and $\delta^2\text{H}$ isotope ratios are offered upon request.

All **ALPHAGAZ™ products** are made to guarantee high accuracy and repeatability of analysis.
